

SANTIAGO PEREIRA

SOFTWARE DEVELOPER

ABOUT ME

- From the moment I started learning coding I realized I wanted to make it part of my life. Although my journey in the tech industry is just starting, I am super excited to learn new skills to become a better developer.
- Here you will find some projects that I've completed that showcase my skills and general background in developing software

- | | |
|--------------|---------------|
| • HTML | • BOOTSTRAP |
| • CSS | • SASS |
| • JAVASCRIPT | • MONGO DB |
| • REACT JS | • MYSQL |
| • NEXT JS | • GIT |
| • JAVA | • MATERIAL UI |

WORK EXPERIENCE

• [Seasinglab website]

website made for an important company in the city of Tandil which sells all kind of products for lab research. The owner asked for a minimalist website which allows the clients to contact with them. This web was made alongside with other developer who participated in the development and design phase. React js was implemented as main technology

• [Don Remolo pizzeria]

website made with a group of 3 front-end developers, 1 designer, 1 QA tester and 1 back-end developer for the platform <https://idforideas.com/> which helps junior developers to gain experience working in different projects alongside with other people, in this case we worked in a pizza shop with shopping cart and whatsapp button to make the order. All the products data comes from a database we made and connected to the front-end with Node js and Mongo Db.

In this project we used JavaScript, Html, Css, Sass, Bootstrap, figma, Node js and Mongo Db.

• [Soja Deco website]

Soy made candles e-commerce for a real client, this website was made by me and other developer alongside with a web-designer. The technologies used for the buildup were Html, Css, Bootsrap, JavaScript and the WhatsApp Api to be able to send a private message to the business owner. Web-link: <http://soyadeco.com/>

• [CoderHouse React course final project]

Project for CoderHouse, the website is an e-commerce where you can buy furniture, it has a shopping cart where you can see all the added products and simulate a purchase. It also works with firebase as cloud hosted database and the technologies used to make this site were React js, Bootstrap, Css.
